

Atlas — Product Sheet

The Aurora Labs analytics platform (SKU: ATL-100)

Overview

Atlas is the business intelligence platform from Aurora Labs. It connects to data warehouses, provides a drag-and-drop dashboard builder with 40+ chart types, native SQL with autocomplete, and scheduled report delivery to email and Slack.

Editions and pricing

Atlas is available in three editions. Pricing is per user per month, billed annually (see product-pricing.csv for the full table):

Edition	Price	Highlights
Starter	\$29/user/mo	3 dashboards, 2 data sources, community support
Standard	\$49/user/mo	Unlimited dashboards, 10 data sources, SSO
Enterprise	\$99/user/mo	Row-level security, audit log, dedicated support

Technical specifications

Query engine: cost-based optimizer with vectorized execution (codename Calcite). Supports Snowflake, BigQuery, Postgres, and Redshift. Row-level security with SAML/OIDC single sign-on. p95 warm query latency under 2 seconds.

Security and compliance

AES-256 encryption at rest, TLS 1.2+ in transit, SOC 2 Type II attestation, GDPR-ready (see the Aurora Labs privacy policy). SSO add-on available for \$2 per user per month.
